                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of classifying a breast cancer patient according to prognosis by determining the similarity between the level of expression of each of five gene for which markers are listed in the specification, in a cell sample maken from the breast cancer patient, to control levels of expression for each respective five genes to obtain a patient similarity value. The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invertion. This sequence corresponds to a marker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         834 GACAATTCAACTTACTCTCTTTCCACAGCAACCCCAT---TCCAGCTGCCATTGAAG 890

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCTTTCTCTAAGACTATCGAAGACACCCCACTCAGTCACCACTACTATGATAACATGTTA 1168
                                                                                                                                                                                     sialyltransferase. The gene encodes a protein of 356 a.a. The gene (called WP1) was isolated from the human melanoma cell line WM266-4 and cloned into the E.coli plasmid pUC119 to create pUC119.WP1. The gene was instred into the expression vector pAMORGISSc to produce the plasmid pAMORDESAWP1. The missing N-terminal 19 a.a. were inserted into this vector by PCR amplification using the primers AAQ77835-6. Alpha-2,8-sialyltransferase is useful in the production of physiologically active sugar chains e.g. in the conversion of ganglioside GM3 to GD3. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   928

                                                                                                                                                                                                                                                                                         A cDNA clone coding for alpha 2 9-sialyltransferase was isolated from a human melanoma SK-Mel-28 cDNA 1 brary and sequenced. The insert codes for a protein having ganglioside 3-synthase activity which is useful as a biochemical reagent. The cDNA is useful for detecting tumour antigen by Northern blot analysis

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or call sample exposed to the compound, and comparing the gene expression profile to a database compound, and comparing the differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of compound, predicting hepatotoxicity or the progression of a toxic effect of a compound identifying an agent that modulates the onset or progression of a toxic response, predicting the callular pathways that a compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the present invention using a database of genes having liver toxin-induced liver tissues or cells for drug screening and toxicity markers in liver tissues or cells for drug screening and toxicity markers in the sequence date for this patent did not form part of the princed.

Cancer-associated mucleic acid molecules (N) and proteins (P), where the cancer-associated mucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient s genome cexpession by rectifying mutations or deletions in a patient s genome to produce the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the

Claim 1; SEQ ID NO 4499; 327pp + Sequence Listing; English.

```
probes with a collection of detentably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The propes are useful for verifying the expression of regions of genomid DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on calls. The microarray of this invention presents a far grater diversity of probes for measuring gene expression, with far less has then expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the print of the printed specification, but was obtained in electronic format directly from WIPO at the print of the print of the printed specification, but was obtained in electronic format directly from with the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CCACTCAGTCACCACTACTATGA PACATGTTACCTAAGCATGGTTTCCACCAGATGCCT 1195

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                               1 cggagcggcgagtcggtgcc......gctattagcaaaaaaaa 3166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
